

Spark makes it easy to work through your inbox faster than ever before. No matter if it's one new message or hundreds, you can do it in a couple of minutes.

Its **Smart Inbox** automatically categorizes incoming emails for easy processing, based on the sender and its importance (separates emails from real people and automated services).

Spark **Integrates** with major cloud services to make your email experience better and frictionless (Dropbox, Box, Evernote, Pocket, Instapaper, etc. - you can even connect two accounts for one service).

It's also the most **Customizable** email client which helps you to sort out email **your way**: add widgets (calendar, attachments, smart folders, etc) and select various interface options and buttons.

We've tried to improve every core aspect of an email client to make it work for almost every person.

Here are a few more reasons why **Spark is unique**:

- ▶ Quick replies
- ▶ Smart Search
- ▶ Fast Signatures
- ▶ Smart Notifications
- ▶ Attachments
- ▶ Save email as PDF
- ▶ Apple Watch App
- ▶ Great design and details

Spark is currently an iPhone FREE app. We plan to make it a cross-platform service that will make email communication better.
